

// SNAPTEX

Syndiotactic Polystyren **N**ot absorb water **A**chieve good **P**erformance

A high-performance material designed to suit each season by leveraging the unique properties of SPS fiber.

A comfortable wearing experience that retains heat even in cold seasons, while remaining lightweight and easy to move in.

Heat Loss Prevention

By using hydrophobic fibers on the skin side and keeping the skin surface dry at all times, it helps reduce the risk of hypothermia.

Heat Resistance

With high heat resistance, it enables transfer printing and ironing that were not possible with conventional PP blends.

Light Weight

With a low specific gravity and lightweight properties, it provides a light and comfortable feel when worn.

Low Thermal Conductivity

Due to its low thermal conductivity, it helps prevent body heat from escaping, providing excellent heat retention.
